

THE BEST

Accounting Software for
Working From Home.

autocount[®]
ACCOUNTING

With the ubiquity of mobile devices and high-speed internet access available in most locations,

Transitioning the bulk of work from the office to home is a relatively easy process if you are currently using

autocount^r
ACCOUNTING

AutoCount Accounting internet user access option can help make remote work set up a lot easier as it is directly connecting to the company server database via internet connection.

HQ Data Center

Remote site home branch

By contrast, many accounting software providers in the market are still relying on 3rd party remote PC access software for connectivity.

So what's the problem ?

- ▶ Higher risk in terms of security such as ransomware threats
- ▶ Incur extra costs for additional remote access PC software
- ▶ Remote printing is a regular problem

All AutoCount Accounting users can now get connected and **work from home** via Internet User login from different locations, to access to their company database to enable work anywhere at any time.

** Notes: The data transfer speed is dependent on the internet bandwidth in your location.*

This is the best time to equip your employees with an internet user login to stay productive and work from home flexibly...

Frequently Asked Questions

1. Do I need to purchase additional AutoCount network user to connect from outside remotely?

Answer: No need. You just need to upgrade from your existing network user to internet user. For example, I have 6 network users in total. Currently, 2 staff are required to work at home, so I only need to upgrade 2 network users to 2 internet users.

2. Do my server need to switch on when connecting from outside?

Answer: Yes, your server needs to switch on to enable the user to connect from outside.

3. Do I need to purchase third party software to connect to the office?

Answer: You don't need to purchase third-party software. You only need to upgrade your existing Autocount network user to Autocount Internet user.

- Need to upgrade network user to internet user. Ver 1.9 price .
- The internet user for v2 is Free of Charge.
- 3rd party software incurs high investment cost and yearly maintenance

Frequently Asked Questions

4. What is the extra cost to me if I decided to add the internet user?

Answer: Just pay the upgrade fee per network user upgrade to internet network user. Setup fee charged separately.

5. How long it takes to set up the internet network user?

Answer: Setup can be complete in 20-30 minutes for a single PC; however, setup time will depend on how many pc you have and any inconvenience caused by windows OS.

6. Is it secure to allow someone to connect from outside, will virus affect my server?

Answer: We strongly recommend you to set up a VPN to connect as it is more secured.

7. Can I set up in the cloud?

Answer: Yes, you may migrate your server to cloud hosting and connect through an internet user.

8. If I am using Streamyx, can I use an internet user login?

Answer: We recommend internet speed to be minimum 30mbps download and 30mbps upload speed. More internet user can connect if you have higher internet speed.
